

5 REAL WORLD POWER PLATFORM APPLICATIONS

1 Customised Data Management

Build a custom data entry form for employees to use on their mobile devices, and then generate real-time reports and visualizations based on that data.

2 Automate Order Fulfilment & Staff Schedules

Automate your order fulfillment processes, track inventory and order status, manage employee schedules, and seamlessly integrate with your ERP system. Simplify operations, reduce errors, and boost productivity using Power Apps and Power Automate.

5 Legacy Integration

Don't think for a second just because you use legacy systems you can't modernise. Power Platform integrates with most ERP & CRM systems meaning you can create workflows to update a CRM contact when they submit a website form. Go the extra step and add automation to point your sales staff to a SharePoint directory full of sales collateral to get in touch with that customer.

3 Enhance Customer Service

Use Power Automate to create workflows that assign customer service requests to the correct department and track progress all through a custom made dashboard. Enhance it further and add a step to send out custom and personalised surveys after to really capture what your customers are thinking.

4 HR Workflow Automation

Communicate with your employees better and use Power Apps and Power Automate to really modernise your onboarding. Send new hire paperwork off, send the response to HR for review and approval, send welcome emails to the new employee and much more. You can even integrate the whole process with DocuSign.
