

Process Automation

Completely scalable solution

Speedy 2-Day implementation

Greater business visibility

OVERVIEW

Russell Gordon Contracting (RGC), experts in concrete and construction, previously managed their extensive scheduling through a commendable spreadsheet. While effective, the **spreadsheet lacked scalability**. Introducing a solution, we proposed and implemented a Microsoft Power App within an impressively short timeframe—from signing on a Friday to full implementation by the following Wednesday. **Microsoft Power Apps** proved to be the optimal choice for addressing their needs.

Our team implemented on-site with minimal initial information and, after two days (and numerous snacks), delivered a functional custom app. The result: a fool-proof, digital job form and multiple scheduling views for tracking personnel and equipment locations. Notably, the solution is poised for future growth and seamless integration with the broader business infrastructure.

Initially, we discussed a definite phase 2, but now we're considering phases 3, 4, 5, 6, and beyond. Having you guys on board adds greater value to this extended plan

Niko Va'aelua, General Manager, RGC
